

# Case Study

## NETWORK INSTALLATION

## *Autoscribe Ltd*

### Client Profile

Autoscribe Informatics is an international software developer, providing industry leading database management applications. The UK office contains approximately 25 people and being a software house, the requirements and IT infrastructure are fairly complex.

### The Challenge

Net Technical Solutions was engaged by Autoscribe when, following plans for immediate expansion, they secured new office premises at fairly short notice. The move required careful planning within tight timescales and involved not only moving their IT network and infrastructure but also provisioning connectivity and telephony.

### Our Solution

As soon as we were told where their new location was to be, we ordered and fast-tracked PSTN lines, with simultaneous Fibre Internet provision for both Voice & Data. On the move date, the existing cabinet was dismantled and reassembled in the new location by 1.30pm with key employees up and running immediately. Day two saw the old telephone number re-diverted, phones deployed on desks and network snagging completed, all with minimum fuss and bother.

### The Outcome

Since the move, remote access into the school has been vastly improved and each project has been delivered on time and in budget with full documentation/handover.

**“ Under a tight timeline we turned to Net Technical Solutions for assistance in moving all IT equipment to our new premises.**

**The process was handled incredibly well and with the utmost care, having us back up and running within a few hours. The following day the cloud-based phone system was successfully installed, completing the technical aspect of our move. A big thank you to Net Technical Solutions! ”**

*Steve Boother , Autoscribe Ltd*
